

LULL TELE HANDLER

Model 944E-42 • Model 1044C-54 II

PRODUCT DESCRIPTION

When your job is all about placing loads exactly where they need to be, then there's only one machine for you. Only Lull gives you the ability to move an entire load 80 inches horizontally at full height, and the capacity to lift up to 4,000lb of brick, block or steel as high as 54ft. With the precision load placement system and proportional joystick controls, you can place loads faster and more accurately because you're the one in control.

The horizontal load placement system operates by moving the rear of the chassis forward, making it easier to load material onto scaffolding or other work areas with precision. Complex maneuvering or driving is no longer necessary with the unique ability of the Lull telehandlers.

MANEUVERABILITY

Three steering modes — 4-wheel circle, 4-wheel crab, 2-wheel front — allow you to navigate the job site according to terrain conditions. Standard front outriggers on the Model 1044C-54 Series II provide added operator confidence and extra lifting capacity. With more agility and rough terrain capability, Lull telehandlers will help make your jobs go faster and easier than ever.

MODEL 944E-42

More power, more visibility and all the advantages of the horizontal load placement system combine to make the Lull model 944E-42 telehandler a powerful and productive tool on any job site. Plus, with 9,000 lb capacity and a full line of attachments to choose from, you'll have versatility to spare.

Max. Capacity: 9,000lb (4,082 kg)
Max. Lift: 42ft (12.8 m)

MODEL 1044C-54 II

Whether it's general construction, steel erection, masonry or general applications, the strongest and highest reaching Lull model 1044C-54 Series II telehandler can meet the challenge. Even with a 10,000lb capacity and 54 ft of lift height, the model 1044C-54 Series II still delivers faster and easier load placement with the exclusive horizontal load placement system.

Max. Capacity: 10,000lb (4,536 kg)
Max. Lift: 54ft (16.46 m)
